

Human Histone H3 Mutation Antibodies

Histone mutations have been identified in multiple cancers and demonstrated potential as a useful diagnostic tool. Our Histone Mutation Antibodies have been extensively validated in a variety of applications, including IHC, WB, ICC, ELISA, and CHIP. Histone H3 K27M mutation is linked to diffuse mid-line glioma, and H3 K36M is closely associated with chondroblastoma. H3.3 G34 mutations are common in giant cell tumors of bone and glioblastoma.

Product Name	Type	Catalog No.	Clone	Application	Pack Size
H3 K36M	Rabbit mAb	REV-31-1085-00	RM193	WB, IHC, ELISA, ICC, CHIP	100µL/400µL
H3 K27M	Rabbit mAb	REV-31-1175-00	RM192	WB, IHC, ELISA, ICC	100µL/400µL
H3 K9M	Rabbit mAb	REV-31-1160-00	RM191	WB, IHC, ELISA, ICC	100µL/400µL
H3 K4M	Rabbit mAb	REV-31-1250-00	RM363	WB, IHC, ELISA, ICC	100µL/400µL
H3.3 G34W	Rabbit mAb	REV-31-1145-00	RM263	WB, IHC, ELISA, ICC, CHIP	100µL/400µL
H3.3 G34R	Rabbit mAb	REV-31-1120-00	RM240	WB, IHC, ELISA, ICC, CHIP	100µL/400µL
H3.3 G34V	Rabbit mAb	REV-31-1193-00	RM307	WB, IHC, ELISA, ICC	100µL/400µL
